

# Welcome

Welcome to the LBT calculation and storage resources dedicated wiki.

This wiki has no claim to teach you how to calculate on HPC resources, but how to simply and correctly use ours.

Although this wiki was originally written for LBT laboratory members, whether you are external users (collaborators, partners) or IBPC members, you will find here everything you need to start using the resources available.

Thus, you can find here the LBT data center history, all the rules and limits, as well as a brief overview of our IT architecture and the best use possible (with a quick start guide and some performance improvement tips); and probably more...

Enjoy reading and feel free to contact me directly for more help (for system use and feedbacks only, not for software concerns).
